

My car is consuming more gasoline...

Have you changed your Air Cleaner Filter?

1

I think the car is consuming more gasoline these days.

2

Your air cleaner filter is dirty and needs to be changed. The air cleaner filter is something like a mask. It prevents dust from entering the engine when it takes in air. When the filter gets clogged, it reduces the air flow to the engine, so it can lead to bad fuel efficiency. There are also other reasons that can cause bad fuel efficiency, so we will inspect other parts too!

Really? Why don't we take the car to the Suzuki dealer for a checkup?

3

I'm so glad we had the car checked at a Suzuki dealer!

4

Hahaha!

Growl...

Would you like to get a checkup on your fuel efficiency, too?

I just ate lunch but I'm already hungry!

[Useful tips on air cleaner filter]

The air cleaner filter has an important role in removing dirt and other particles from the air taken in from outside, and sending clean air to the engine. When the air cleaner filter gets dirty and clogged up, less air will flow to the engine. This can cause symptoms such as engine power loss or bad fuel efficiency. In worst cases, the lack of air will cause incomplete combustion and ruin the spark plugs, which will lead to engine problems such as starting failure. Be sure to have your air cleaner filter checked and replaced regularly at a Suzuki dealer.

Visit your Suzuki Dealer for a checkup!

KEEP it REAL!
